Course Syllabus

A6857
Measuring the Great Indoors

Semester: Fall 2019
Meeting Time: Tuesday 7p-9p
Room: Avery 505

Instructors: Gabrielle Brainard, geb2137@columbia.edu
Violet Whitney, vw2205@columbia.edu

Revised 9/3/19.

Refer to https://medium.com/measuring-the-great-indoors (Links to an external site.) for up to date course information.

Course Description

This course will explore techniques for working with data from the physical world, with the aim of understanding and manipulating dynamic, interactive environments. Students will use hardware (sensors, microprocessors, computer vision cameras), software (IFTTT and Processing), and their own powers of observation to characterize “the great indoors.” Our investigations will focus on heat, light, and motion: shifting temperature gradients, changing qualities of light, and traffic patterns in a busy hallway. We’ll interpret data using industry standards for indoor environmental quality, and consider how these standards may or may not capture the range of human experience in buildings.

After conducting baseline environmental measurements of a space in Avery Hall, students will construct their own interventions in the space and use prototyping workflows (hypothesis, test, conclusion, retest) to evaluate the results. While the course includes elements of building science and physical computing, its primary aim is to encourage students to consider dynamic spatial and environmental qualities in their design work.

Goals
• Understand and explore techniques embedding sensors and actuators in the built environment.

• Understand cybernetic systems and human computer interaction with the aim of reading and manipulating dynamic, interactive environments.

• Question how modern day digital systems (smart home sensors, Amazon Echos, Computer Vision Cameras, live projection, etc) influence habits, flows, cultures, and behaviors.

Course Content

The first half of the semester will be organized in modules addressing heat, light, sound, and motion. Each module will include a lecture covering building physics, relevant standards, and measuring techniques. Most lectures will be followed by a lab session consisting of hands-on exercises related to the lecture topic. Modules posted online will reinforce the lab exercises.

Alongside the lectures and labs, students will work on a semester-long project exploring the construction of a cybernetic feedback loop (Measure/Act). In the first half of the semester, students will work individually and focus on the technical resolution of their projects. In the second half of the semester, students will continue to develop their projects in groups, with the added complexity of siting their project in a public space in Avery Hall.

Guest lectures will feature professionals who use data from existing buildings in their daily work in a variety of contexts.

Avery Hall

Avery Hall will be the focus of our investigations and interventions. Students will collect and interpret data from spaces within the school, and use the building as the site for interactive installations during the second half of the semester. These installations will be exhibited to the wider GSAPP community as part of the End-of-Year Show.

Course Website

The course website on Medium [https://medium.com/measuring-the-great-indoors (Links to an external site.)] will be the hub for all course information and resources. Lectures, assignments and readings will be posted here, and students will upload their assignments to – and present them from – the site.
Students are expected to purchase their own materials for the course, including sensing hardware and instruments. Instructors may be able to share some hardware with students, and student teams may share hardware amongst themselves. Students are encouraged to use off-the-shelf hardware rather than building their own sensors. If students have prior experience with platforms like Arduino, they may pursue projects involving physical computing with the permission of the instructors.

Course Schedule

The preliminary schedule below is subject to change. Refer to the course website for the latest version.

<table>
<thead>
<tr>
<th>Week</th>
<th>Date</th>

Present: Measure/Act Project Proposal
Lecture: Light, Interventions with Processing and Projectors
5 1-Oct Assignment: Measure/Act Revised System Diagram, Materials List
Read: Digital Privacy (TBD)
Module: Equipment Sources

Class Discussion: Digital Privacy
Lecture: Motion
6 8-Oct Lab: Computer Vision with Processing
Assignment: Measure/Act Working Prototype
Module: TBD

Present: Measure/Act Working Prototype
Lab: Desk Crits
7 15-Oct Assignment: Final Project
Module: TBD

--Studio Midterm Reviews--
8 22-Oct Guest Lecture: Sound
Lab: Sound (TBD)

--Studio Midterm Reviews--
9 29-Oct Present: Midterm

Final Project: Measure/Act II
(Group)
10 5-Nov NO CLASS - Election Day
Lecture: User Testing / Interaction Design
11 12-Nov Workshop: Final Project
Lab: Site Selection & Observation
12 19- Workshop: Final Project
Nov 13

26-Nov  Workshop: Final Project

3-Dec  Guest Lecture - TBD

14

13-Dec  Present: Final Review

Grading and Assessment

- This class involves experimentation, and students should be prepared for hardware failures, software bugs, and more. Assessment will be based on student effort and process in addition to the final product.
- Work is to be completed at the beginning of class on the due date and uploaded to Medium prior to the start of class. Late work may receive a reduced grade.
- Grades for groupwork are assigned to the group. On rare occasions, individual grades may be awarded for exceptional or deficient performance within a group. All group members must participate equally in group presentations.

Grading Criteria:

<table>
<thead>
<tr>
<th>Criteria</th>
<th>Description</th>
<th>%</th>
</tr>
</thead>
</table>
| Attendance and Participation    | • Attendance  
                                 | • Preparedness for class presentations, crits, and discussions  
                                 | • Embracing and learning from failure, taking risk             | 20%  |
| Measure/Act I (Individual project) | • Design concept  
                                 | • Weekly progress and process  
                                 | • Technical resolution                                     | 40%  |
Measure/Act II
(Group project)

- Design concept
- Weekly progress and process
- Technical resolution

Attendance

It is important that you attend every class. Regular attendance is necessary to understand the material and successfully complete the assignments.

An absence is “excused” if you are sick and submit a doctor’s note, or have a serious issue that causes you to miss class, such as a family emergency. All other absences are “unexcused.” Students may have up to two unexcused absences per semester. Students with three or more unexcused absences will have their final grade reduced, and may fail the course.

If you know in advance that you will be absent for any reason, email the instructors to make arrangements to complete make-up work.

Policies and Academic Integrity

- If you require an accommodation for a disability, please let the instructor know as soon as possible. Some aspects of the course may be modified to facilitate your participation and progress.
- All students are held to the academic policies of the University.
- In this course we will work in a collaborative and open manner freely sharing information, ideas and resources. However, assignments and presentations that are indicated as individual efforts must adhere to a high standard of academic integrity. In any case, in any context, representing another’s work as your own is dishonest.
- Students who miss deadlines due to valid extenuating circumstances may submit the required work at a later date, as agreed upon with the instructor. University regulations limit such circumstances to serious personal illness and death in the immediate family. Unexcused late projects will not be accepted. Incomplete projects will be evaluated in relation to their degree of completion, and a student will be allowed to present such work only with instructor approval. Lectures and demonstrations cannot be repeated. There is no excuse for late submittals, late attendance at reviews or pin ups, due to printer or computer problems. You have to organize your output ahead of time or find other resources outside the college to complete your work on time. Late work will be accepted only at the discretion of the instructors and is subject to a 5% grade deduction for every 24 hours past the deadline.
Resources

The texts below will be on reserve in the Library. Required and suggested readings are noted in the Course Schedule. PDFs of readings will be posted to the course website.

**Computing**

**Architecture and Urban Design**

- Keller Easterling, *The Internet in 4D* ([link](http://example.com))

**Design**

- Bill Moggridge, *Designing Interactions* (MIT Press, 2007)

**Building Science and Sensory Perception**

• Lisa Heschong, *Thermal Delight in Architecture* (MIT Press, 1979)

Critique

• Dan Hill, *The City is My Home Screen* [link](Links to an external site.)
• We Built an ‘Unbelievable’ (but Legal) Facial Recognition Machine By Sahil Chinoy, NY Times, [link](Links to an external site.)
