**case**  
With the pandemic, everything became more difficult to produce and achieve. In our small bubble that we currently call home, Columbia University, the toughest challenge has been accepting the current situation of on-line learning through zoom. Technology has come a long way, but still lacks connection.

*"LINK will revolutionize ZOOM" - Behruz Hairullaev*

**concept**  
LINK provides a focal point for students, faculty, and staff to enter a new version of on-line learning. As a society we went to the movies, sporting events, and gatherings even though we had televisions. Spaces inhabit an "Event" factor to them. LINK will be the designated hub to conduct lectures, classes, and on-line hangouts. Within the main hub, there are four sub-hubs located at the perimeter, for separate "Zoom rooms" and social distancing. The geometry is held up by inflated PVC Symmetrical Tubing. This provides the structural integrity, and has integrated seating. The Pavilion also takes advantage of the site and can project outward into the existing seating, for a larger audience. After use, the pavilion can easily be deflated and relocated at a different site.
