Program: Storm Water Management
Location: New York, USA
Critic: Laurie Hawkinson
This project analyzes impacts of zoning, air pollution, and population density in Bronx before and after the construction of the CBE. The proposal challenges the intentionally created north-south divide by rerouting traffic around the CBE.

Softwares Used: Rhino, Adobe Suite, Arch GIS, Tableau

Top: Population density analysis showing how manufacturing areas of the south pushed Bronx's population northwards and away from Manhattan.

Bottom: Re-routed traffic stops and proposed parking for trucks to decrease air pollution related north and south divide.
