Columbia GSAPP is pleased to announce the winning projects for the 2020 Buell Center Paris Prize. This annual prize, which was awarded for the first time in 2020, recognizes outstanding architectural work by students in the MS Architecture, Planning, and Preservation (MAPP) program. The prize was established by the Buell Center for the Study of American Architecture in collaboration with Columbia GSAPP and the Irwin S. Chanin School of Architecture.

The winning project, entitled "Uncertain Times," was designed by a team of students led by MAPP Professor Mary McLeod. The project addresses the impact of climate change on urban environments and proposes innovative solutions to create resilient communities. The project explores the intersection of architecture, urban planning, and social justice, and aims to create a more equitable and sustainable future.

In addition to the prize, Columbia GSAPP is hosting a series of virtual conversations and events to celebrate the work of the winning students. These events will feature lectures, interviews, and discussions with leading architects and industry experts. The events are open to the public and will be held throughout the spring semester.

For more information about the 2020 Buell Center Paris Prize and the virtual conversations, please visit the Columbia GSAPP website.
